HOGUE DRONE SERVICES

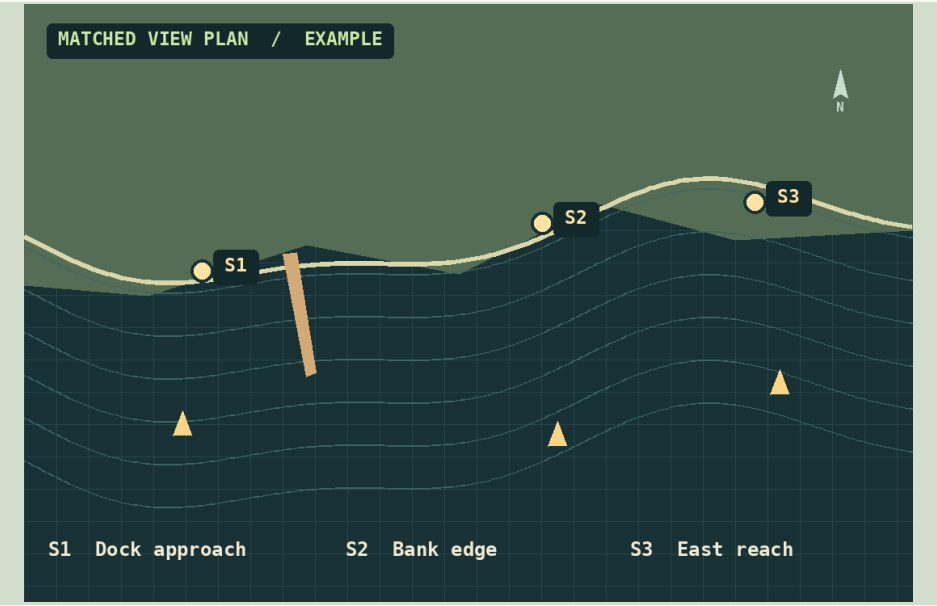

FIELD SERVICES / CUSTOMER SAMPLE

Shoreline comparison sheet

Two rounds. Three repeatable viewpoints.

CEDAR REACH / EXAMPLE

A · late October | B · early May

REPEAT STATIONS / EXAMPLE PLAN

READ THE EXAMPLE

Station key

Sample plan. Repeat each view during the second visit using the recorded heading, camera tilt and fixed landmark.

Register extract

Station	Observed in sample round B	Ground follow-up
S1 · Dock approach	Outer decking appears offset at the seam.	Owner to check the joint.
S2 · Bank edge	Exposed roots visible beside reference rock.	Repeat detail view in June.
S3 · East reach	Waterline sits higher against the post.	Compare with lake-level notes.

Field note

A waterline shift can change the apparent shoreline. The record pairs images and conditions; a contractor or engineer determines cause and repair scope.
